A790 ➔ Burgundy Smoke
A850 ➔ Graphite
A880 ➔ Onyx
Specifications

Crossville® recommends a grout joint of 3/16 to 1/4 inch.

*Note: The cut/bevel tile is cut from larger format tile and the edges are beveled to provide a factory appearance.

6 x 6 CS and PO, and 8 x 8 CGS and CD are not stocked and require an extra two to eight weeks for delivery depending on Crossville’s production schedule.

Actual measurements stated in inches indicate tile is calibrated (non-rectified).

Actual measurements stated in mm indicate tile is rectified.

* The increased real world traction of these types of surfaces cannot be fully realized by any current COF testing methodologies due to their exaggerated facial structure.

** Due to the heavily texture surface DCOF value is not able to be measured by testing device.

Shade & Texture Index

Cross-Colors has a shade variation of V1.

V1 Uniform appearance
V2 Slight Variation
V3 Moderate Variation
V4 Substantial Variation

Differences among pieces from the same production run are minimal.

Recommended Use

Cross-Colors® – Cross-Colors Unpolished (UPS) is recommended for interior floors, walls, countertops, and exterior walls in both residential and commercial environments. Cross-Colors (PO) is recommended for interior floors (except where standing water may occur), walls, countertops and exterior walls in both residential and commercial environments.

Cross-Slate® (CS) – The Cross-Slate finish combines the rustic and textured feel of slate with the through-body color and durability of Porcelain Stone®. Through-body color, unglazed structured surface, and a variety of sizes provide a strong commercial value where enhanced traction is needed for high traffic interior and exterior spaces. Cross-Slate is recommended for interior floors and walls as well as exterior walls and exterior walking surfaces in both residential and commercial environments.

Cross-Tread® (CTS) – Increased slip resistance and ease of maintenance make this tile a suitable choice for wet and greasy floor areas, as well as for exterior walking surfaces. The Cross-Tread surface pattern is eye-catching, making it a great option for transitional areas and for use as an accent tile.

Crossdot® (CD) – The raised-dot pattern, with a “roughened” surface atop each dot, provides increased coefficient of friction. It is suitable for most commercial kitchens, food prep areas, service stations and other back-of-the-house areas, as well as for exterior walking surfaces.

Cross-Grip® (CGS) – Developed in conjunction with restaurant owners, Cross-Grip is a possible solution for those areas where slips and falls are of greatest concern. The patented raised-point texture has earned Cross-Grip the highest possible performance rating in the National Restaurant Association’s testing for slip resistance. It is suitable for areas where grease, food, oil and other residue tend to accumulate.

Cross-Grip® is a possible solution for those areas where slips and falls are of greatest concern. The patented raised-point texture has earned Cross-Grip the highest possible performance rating in the National Restaurant Association’s testing for slip resistance. It is suitable for areas where grease, food, oil and other residue tend to accumulate.

Care and Maintenance

Regular cleaning is the best way to keep Cross-Colors tile looking good for years to come. Use clean, hot water (combined with a household cleaner for more aggressive cleaning). Rinse thoroughly and dry with a soft cloth. No waxes are needed. More information regarding the care and maintenance of Crossville® products is available at CrossvilleInc.com.

Our Warranty

Crossville Inc. guarantees that its products will meet or exceed the performance specifications outlined in ANSI A137.1:2012. For complete details check our website at CrossvilleInc.com.

Environmentally Conscious

Cross-Colors contains a minimum of 4% pre-consumer recycled content and is manufactured by Crossville using proprietary processes. Crossville recycles nearly 12 million pounds of previously discarded filtrate and fired tile waste. In addition to its own fired waste recycling, Crossville also accepts and recycles reclaimed, previously installed tile through its Tile Take-Back™ program. For more information, visit CrossvilleInc.com/green.

Wet area use for 3 x 3 Mosaics

Crossville® produces these products with the Cross-Sheen® finish. They deliver a wet dynamic coefficient of friction equal to or greater than 0.50 on the surface of the tile. Their small 3 x 3 size ensures frequent grout joints which provides traction and drainage. Crossville cannot control situations involving incorrect installation, improper slope to the drain for elimination of standing water, and poor surface cleaning.

This information is provided so that customers may make a realistic and informed decision when comparing Crossville Mosaics to other tile products in wet area environments, such as residential commercial bathrooms, showers, and interior pool decks.

The defining threshold value 0.42 is for level interior spaces expected to be walked upon when wet, a wet DCOF of less than 0.42 shall only be installed when the surface will be kept dry when walked upon and proper safety procedures will be applied when cleaning the tiles.
